01

Abstract

WolvCapital is a professionally managed digital asset investment platform combining structured investment plans, blockchain-verified profit distribution, and a decentralized staking ecosystem — all built on BNB Smart Chain.

The platform issues WOLV, a fixed-supply BEP-20 token, as verifiable on-chain proof of investor earnings. Unlike traditional investment platforms that issue PDF statements, WolvCapital distributes WOLV tokens directly to investor wallets — creating permanent, publicly auditable records of every profit distribution.

WolvCapital operates under SEC registration, FinCEN MSB compliance, and full AML/KYC procedures, bridging institutional finance standards with blockchain transparency.

02

Problem Statement

Traditional investment platforms suffer from a fundamental trust problem: profit records exist only as internal database entries or PDF statements that investors cannot independently verify. This creates opacity, disputes, and vulnerability to manipulation.

Simultaneously, the DeFi ecosystem offers on-chain transparency but lacks regulatory compliance, institutional custody, and professional portfolio management — making it inaccessible or unsafe for mainstream investors.

WolvCapital addresses both failures: institutional-grade compliance and custody combined with blockchain-verifiable profit records through the WOLV Token system.

Hi! How can I help you today?

03

Platform Architecture

WolvCapital operates a two-layer architecture. The off-chain layer handles KYC verification, fiat onboarding, portfolio management, and manual withdrawal approvals — providing regulatory compliance and fraud prevention. The on-chain layer handles WOLV token distribution, staking contracts, and the reward pool.

The frontend is built on Next.js 16 deployed on Vercel, with a scalable cloud backend. All smart contracts are deployed on BNB Smart Chain (BSC) — chosen for its low transaction fees, EVM compatibility, and large ecosystem.

Yield Generation: Staking rewards are funded entirely from the Investor Rewards allocation — 600,000,000 WOLV (60% of total supply) held in the timelock-protected RewardPool contract (0x7310f3e07627ce98246973e068bf2ff294f84e5f). This allocation is fixed at deployment and cannot be increased or minted. Rewards are distributed proportionally to stakers based on their tier APY and lock duration. The RewardPool contract is publicly verifiable on BSCScan, allowing any investor to confirm the remaining reward supply at any time.

Investment plans operate on fixed-term, fixed-ROI structures. Returns are calculated server-side and reflected in the investor dashboard daily. When profits are distributed, WOLV tokens are transferred from the treasury wallet to investor wallets — creating an on-chain record of every distribution.

04

Investment Plans

WolvCapital offers four investment tiers, each designed for a different investor profile. All plans operate on fixed terms with structured APY.

Pioneer (Entry): Minimum \$100 · 8% APY · 90-day term. Designed for first-time investors exploring the platform with minimal capital commitment.

Vanguard (Growth): Minimum \$1,000 · 12% APY · 150-day term. For investors ready to commit meaningful capital for consistent compounding returns.

Horizon (Advanced): Minimum \$5,000 · 18% APY · 180-day term. For serious investors seeking significant portfolio growth over a structured period.

Summit VIP (Elite): Minimum \$10,000 · 25% APY · 365-day term. Priority support, maximum returns, and exclusive platform benefits for high-net-worth investors.

05

WOLV Token

WOLV is a BEP-20 token deployed on BNB Smart Chain with a fixed supply of 1,000,000,000 (one billion) tokens. The entire supply was minted to the WolvCapital treasury wallet at deployment — no mint function exists in the contract. Supply can never increase beyond 1 billion.

Token contract: `Oxe0167279aef7bf4ad313d261da82e8366822270c`. The contract is open-source and verified on BSCScan. It includes an emergency pause function controlled exclusively by a multisig wallet for compliance use.

Profit distribution: When investors earn returns on WolvCapital, WOLV tokens are transferred from the treasury wallet directly to the investor's connected wallet. This creates a permanent, on-chain record of every profit distribution — verifiable by anyone on BSCScan.

Token utility: WOLV serves as (1) verifiable proof of investment profits, (2) a stakeable asset earning additional APY rewards, and (3) a future exchange-tradeable asset upon PancakeSwap listing. WOLV is not sold, pre-mined to founders, or distributed for any purpose other than investor profit rewards.

Security audit: WOLV scored 87/100 on SolidityScan security audit. No malicious typecasting, no hidden owner, no self-destruct function, no blacklist capability, no fee manipulation. Full audit report available on SolidityScan.

06

Staking System

WolvCapital's staking system allows WOLV holders to stake their tokens and earn additional APY rewards. The system consists of two audited smart contracts: the StakingContract and the RewardPool.

StakingContract (`Ox7cd22f3c08b4195225da7d043cbe00da118d31ec`): Handles stake deposits, lock periods, reward calculations using Chainlink price feeds, and claims. Staking tiers are available: Starter (8% APY), Growth (12% APY), Pro (18% APY), and Elite (20% APY).

RewardPool (`Ox7310f3e07627ce98246973e068bf2ff294f84e5f`): Holds the WOLV reward supply available for staker claims. Protected by a 48-hour timelock — no funds can be moved without

Hi! How can I help you today?

a 48-hour delay, preventing sudden rug pulls or unauthorized withdrawals.

Chainlink integration: Reward calculations incorporate Chainlink's decentralized price feeds for fair and manipulation-resistant APY computation. This eliminates reliance on a single price source and protects stakers from oracle manipulation attacks.

The reward pool was initially funded with 1,000,000 WOLV from the treasury. WolvCapital commits to maintaining adequate pool funding as the staking user base grows. Pool balance is publicly visible on BSCScan at all times.

07

Tokenomics

Total Supply: 1,000,000,000 WOLV (fixed, immutable). No additional tokens can ever be minted. The contract contains no mint function.

Investor Rewards: 60% — 600,000,000 WOLV. Distributed to investors via staking rewards and profit distributions over the platform lifetime.

Treasury Reserve: 20% — 200,000,000 WOLV. Held in treasury for operational continuity, future reward pool top-ups, and platform development.

Liquidity Reserve: 10% — 100,000,000 WOLV. Reserved for future DEX liquidity provision on PancakeSwap to enable open market trading. A portion of this allocation funds the public presale described below, ahead of listing.

Team & Development: 7% — 70,000,000 WOLV. Allocated to the founding team and ongoing development. Subject to 12-month vesting schedule.

Marketing & Growth: 3% — 30,000,000 WOLV. Reserved for partnerships, listings, community growth, and platform promotion.

No tokens are allocated to founders, team, advisors, or investors for any purpose other than the categories above. All tokens in circulation represent either earned investor rewards or tokens purchased in the public presale below — none are pre-mined to founders or distributed through private allocations.

Presale: WolvCapital runs a public presale of WOLV sourced from the Liquidity Reserve allocation, ahead of DEX listing. The presale sells WOLV for BNB at a fixed price of \$0.50 per WOLV (converted via a Chainlink BNB/USD price feed), with a \$50,000 hard cap on total

Hi! How can I help you today?

funds raised and immediate on-chain token delivery to the buyer's wallet — there is no vesting or lock-up on tokens purchased. The presale contract is treasury-controlled: the treasury may pause the sale, withdraws raised BNB, and reclaims any unsold WOLV once the sale window closes. Contract: 0x04b5c5e204e812c176ce632f3781ea88c500497c — verified on BSCScan and Sourcify.

08

Compliance & Regulation

WolvCapital operates under a comprehensive compliance framework designed to meet international financial regulation standards.

SEC Registration: WolvCapital is registered as an investment adviser with the U.S. Securities and Exchange Commission. All investment plans are structured to comply with applicable securities laws.

FinCEN MSB: Registered as a Money Services Business with the Financial Crimes Enforcement Network. Subject to Bank Secrecy Act requirements including AML program, suspicious activity reporting, and recordkeeping.

KYC/AML: Full Know Your Customer identity verification is required for all investors. Anti-Money Laundering screening is applied to all deposits and withdrawals. PCI-DSS compliance standards govern payment processing.

Manual withdrawal approvals: Every withdrawal request undergoes manual human review before processing. This prevents unauthorized transfers, detects fraudulent activity, and ensures compliance with AML requirements.

All compliance disclosures are published at wolvcapital.com/compliance. Risk disclosures are available at wolvcapital.com/risk-disclosure. By investing, all users acknowledge having read and accepted these disclosures.

09

Security Architecture

Hi! How can I help you today?

Platform security: 256-bit SSL encryption on all connections. JWT authentication with token refresh. Session management with automatic expiry. Rate limiting on all API endpoints.

Smart contract security: All contracts verified on BSCScan with public source code. WOLV token audited on SolidityScan (87/100). No admin keys with unilateral power — pause function requires multisig. RewardPool protected by 48-hour timelock.

Custody: Investor funds are held with licensed institutional custodians, not on the WolvCapital platform directly. This separates investor assets from platform operations.

Bug bounty: WolvCapital maintains an internal bug bounty program. Security researchers who identify and responsibly disclose vulnerabilities are rewarded. Contact security@wolvcapital.com.

Incident response: WolvCapital maintains a documented incident response procedure. The WOLV contract pause function allows immediate freeze of all token transfers in the event of a security incident requiring intervention.

10

Roadmap

Q1 2026 (Completed): Platform launch · KYC/AML integration · Four investment plans live · Manual withdrawal system · Virtual Visa card integration.

Q2 2026 (Completed): WOLV Token deployment on BNB Smart Chain · Fixed supply tokenomics · Treasury model · BSCScan verification · Staking contracts (RewardPool + StakingContract) · Chainlink integration · Staking UI on dashboard.

Q3 2026 (Planned): PancakeSwap liquidity provision · CoinGecko and CoinMarketCap listing applications · Independent third-party smart contract audit · Gnosis Safe multisig implementation · Mobile app launch.

Q4 2026 (Planned): WOLV governance proposals · Cross-chain bridge exploration (ETH/Polygon) · Institutional partnership programme · Enhanced staking tiers · Referral staking rewards.

2027 (Vision): Fully decentralized governance · DAO transition for ec · WOLV listed on tier-1 centralised exchanges · Expanded investment plan offerings.

11

Risk Disclosures

Digital asset investments involve substantial risk of loss. Past performance does not guarantee future results. The value of digital assets can be highly volatile and may result in the loss of your entire investment.

WolvCapital is not a bank. Deposits are not FDIC or SIPC insured. WolvCapital does not guarantee investment returns. All projected ROI figures represent targets based on historical strategy performance, not guaranteed outcomes.

Smart contract risk: Despite audits, all smart contracts carry inherent risk. Bugs, exploits, or unforeseen interactions may result in loss of funds held in staking contracts.

Regulatory risk: The regulatory environment for digital assets is evolving. Changes in applicable laws or regulations may affect WolvCapital's ability to operate in certain jurisdictions.

Full risk disclosure is available at wolvcapital.com/risk-disclosure. By using the WolvCapital platform, you confirm you have read, understood, and accepted all risk disclosures and Terms of Service.

12

Conclusion

WolvCapital represents a new standard for investment platform transparency. By combining institutional-grade compliance, professional portfolio management, and blockchain-verifiable profit records through WOLV Token, we eliminate the trust gap that has historically separated mainstream investors from digital asset markets.

Every WOLV token in circulation represents real, earned investor profit — verifiable on-chain, permanent, and publicly auditable. This is not marketing. It is mathematics recorded on an immutable ledger.

We invite investors, auditors, regulators, and community members to — on BSCScan, on SolidityScan, and on our published compliance documents — be asked for. It should be earned and verifiable.
